

1. What is coordinated multiple *wh*-sluicing?

- In English, there exists multiple sluicing, where two *wh*-remnants are conjoined in a restricted fashion.
- (1) a. * John gave someone something, but I don't know [**who what**]. (Hoyt & Teodorescu 2012: (8a))
b. ? John gave someone to something, but I don't know [**who to what**]. (Hoyt & Teodorescu 2012: (8a))
- When the coordinate conjunction 'and' is inserted between the remnants, the acceptability of the construction increases.
- This construction is called coordinated multiple *wh*-sluicing, or CM-sluicing for short.
- (2) John gave someone something, and I want to know [**who and what**]. (Hoyt & Teodorescu 2012: 86)

2. Previous literature

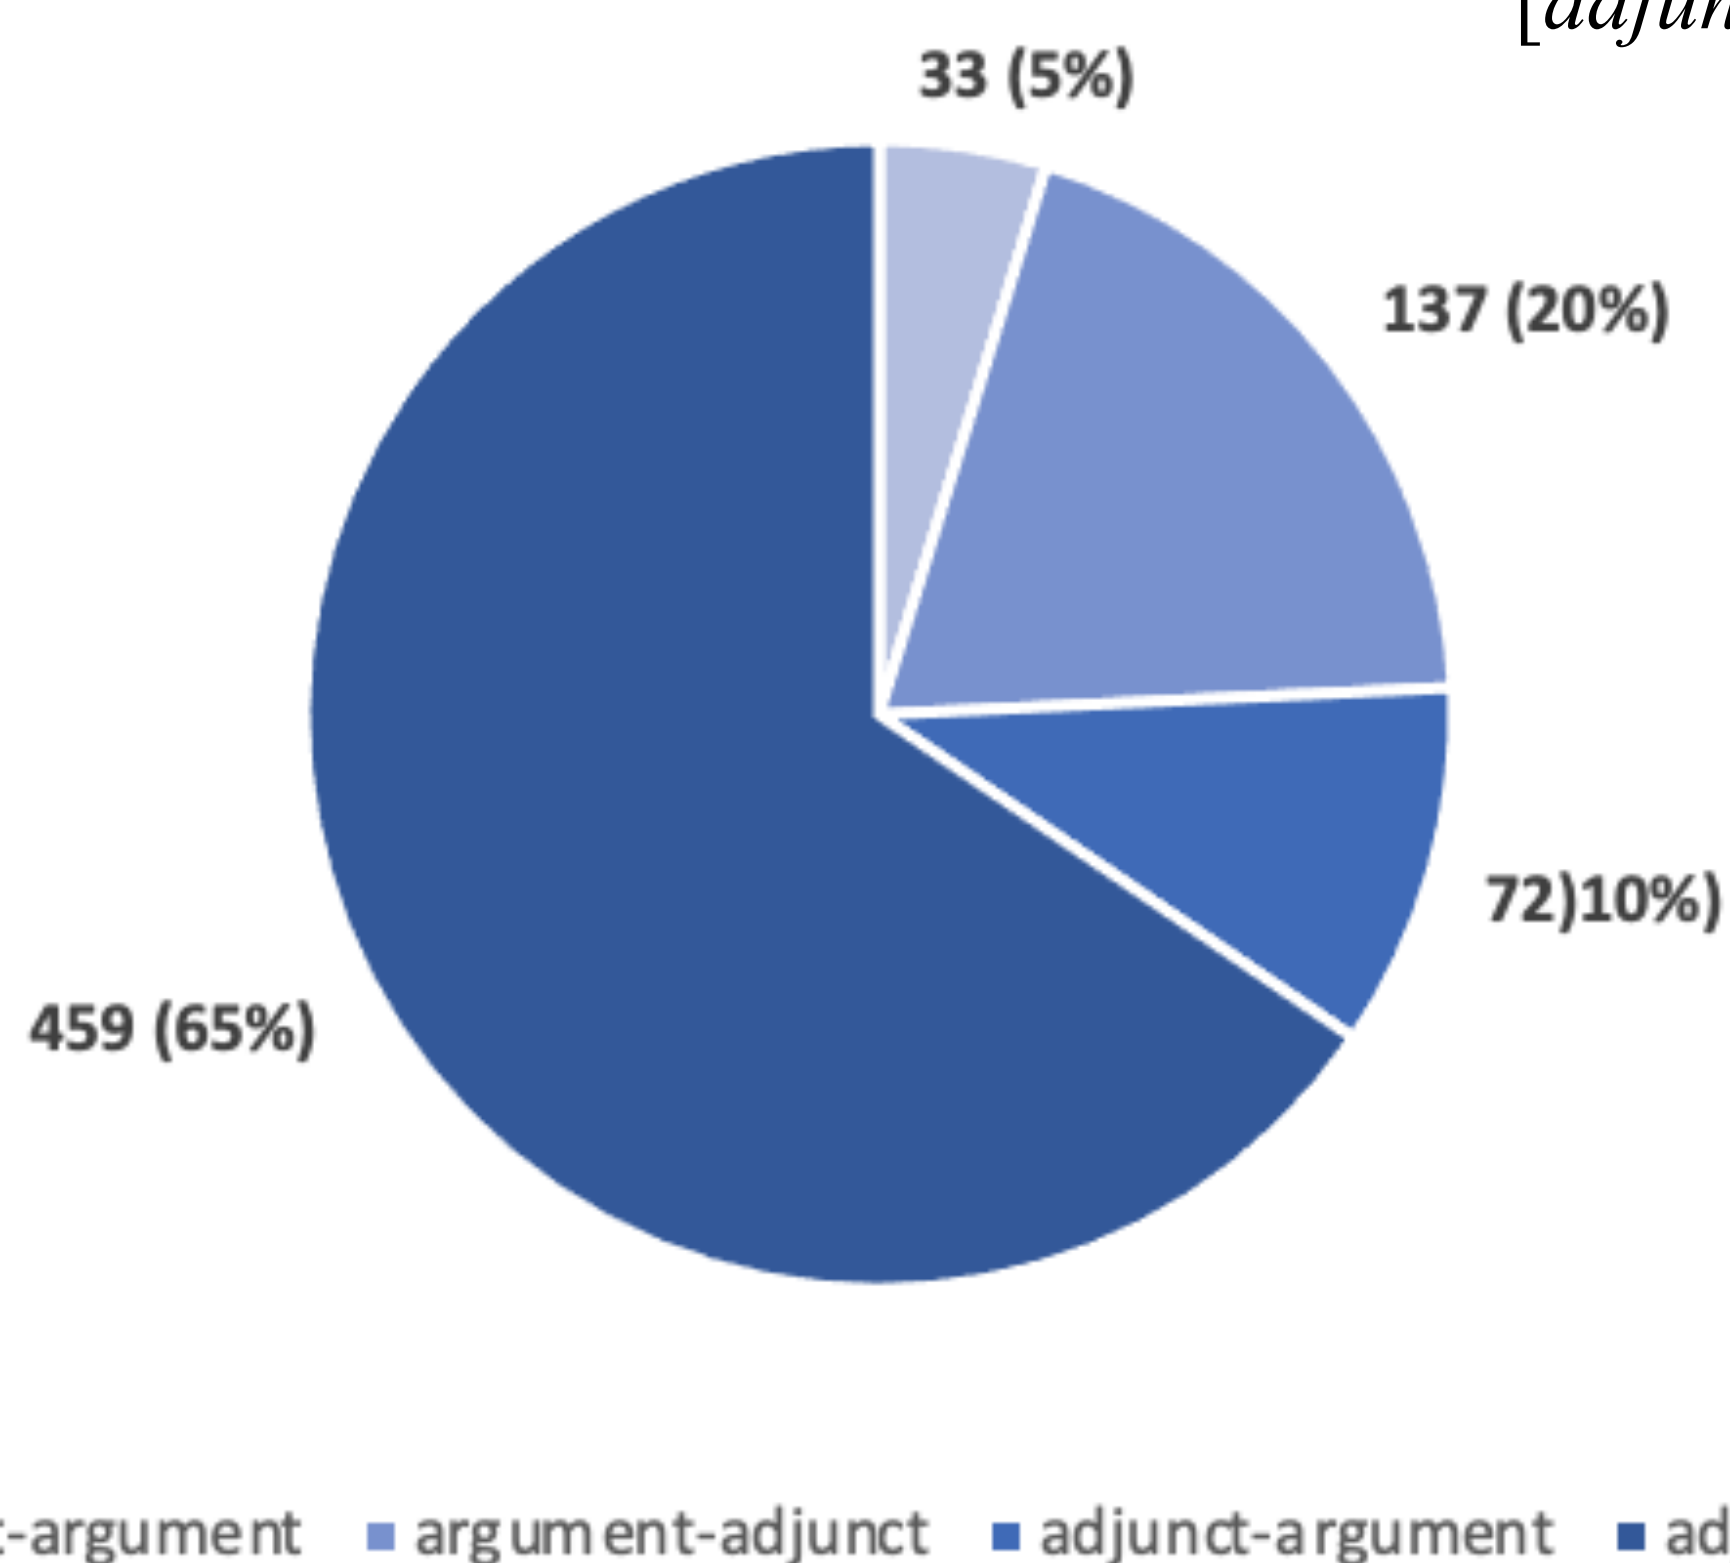

- There are no island restrictions in CM-sluicing, but it is relevant in multiple sluicing (Merchant 2003).
- (3) a. * Bob ate dinner and saw a movie last night, but he didn't say **what where**.
b. Bob ate dinner and saw a movie last night, but he didn't say **what and where**. [Coordinate Structure Constraint]
- Also, CM-sluicing is not under the clause-mate restriction as multiple sluicing is (Abels & Dayal 2017a).
- (4) a. * [Something was brought to the fair [because someone told us to]] but Lee doesn't recall **what who**.
b. [Something was brought to the fair [because someone told us to]] but Lee doesn't recall **what and who**.
- Lastly, CM-sluicing is restricted to the Single-Pair reading, while multiple sluicing only produces the Pair-List reading (Citko & Gračanin-Yuksek 2020).
- (5) a. Some student has published on some topic, but I couldn't tell you **which student on which topic**.
b. Possible response(s): # Kim on CM-sluicing. [Single-Pair reading]
c. Possible response(s): Kim on CM-sluicing, Park on fragment answers, Hye on ellipsis... [Pair-List reading]
- (6) a. Some student has published on some topic, but I couldn't tell you **which student and on which topic**.
b. Possible response(s): Kim on CM-sluicing. [Single-Pair answer]
c. Possible response(s): # Kim on CM-sluicing, Park on fragment answers, Hye on ellipsis... [Pair-List answer]

3. Proposals

- This study aims to collect and analyze authentic data collected from the BYU-BNC corpora.
- In doing so, the study proposes a non-Minimalist approach with the Direct Interpretation approach.

4. Corpus search

- Extensive research from four types of corpora was done: COCA, NOW, TV, and Movies.
- A total of 701 instances of CM-sluicing were collected, which were organized into four distinct types (242 from COCA, 230 from NOW, 124 from Movies, and 105 from TV).
- (7) a. Someone was keeping something a secret. The only way to get Gella out of here is to find out **what and who**. (COCA 1991 FIC) [argument-argument pair]
b. If someone is following us, we're going to find out **who and why**. (Movie 2009 US/CA) [argument-adjunct pair]
c. Something has been achieved, even though he was not quite sure **how and what**. (NOW 1994 GB) [adjunct-argument pair]
d. If Derek was murdered, we need to know **how and why**. (TV 2016 US/CA) [adjunct-adjunct pair]

- Another variable is the antecedent clause sharing, where the putative source of the remnants and the structure of the antecedent were compared.
- (8) a. We knew the plane crashed, but we wanted to know **how and why**. (NOW 2018 US) [Completely sharing]
b. Something was different, but I wasn't sure **what_i** <was different> and **why** <it_i was different>. (NOW 2019 Canada) [Partially sharing]
c. Someone was keeping something a secret. The only way to get Gella out of there is to find out **what_i** <the secret was> **and who** <was keeping it_i a secret>. (COCA 1991 FIC) [Not sharing]
- The partially and not sharing cases account for roughly 30% of the data, which requires analysis on their account.

	COCA	NOW	Movies	TV	total
completely sharing	148	162	97	84	491
partially sharing	83	62	25	18	188
not sharing	11	6	2	3	22
total	242	230	124	105	701

5. Discrepancies in the authentic data

- There are instances where the structural parallelism does not hold at all in the authentic data.
- (9) a. Experts claim that there could be another attack possible, but none of us know **who and what**. (COCA 2016 MOV)
b. * Experts claim that there could be another attack possible, but none of us know [[**who**] there could be another attack possible] **and** [[**what**] there could be another attack possible].
c. Experts claim that there could be another attack possible, but none of us know **who_i** <will attack> **and what** <they_i will attack with>.

6. Direct Interpretation approach

- I propose the *Sluiced-Coordinated-Construction* (*sluiced-coord-ph*) in this paper, which is a non-headed phrase where the two sluiced Head-Fragment constructions (*sluiced-int-cxt*) are conjoined with the second conjunct bearing a CONJ value.
- (10)
$$\left[\begin{array}{l} \text{sluiced-coord-ph} \\ \text{PARAMS } \{x, y\} \\ \text{CONJ } \textit{nil} \\ \text{SEM } [\lambda_x \lambda_y [P(x, y)]] \end{array} \right] \rightarrow \left[\begin{array}{l} \text{sluiced-int-cxt} \\ \text{WH } \{x\} \\ \text{MAX-QUD } [\lambda_x [P(x)]] \end{array} \right], \left[\begin{array}{l} \text{sluiced-int-cxt} \\ \text{CONJ } \textit{conj} \\ \text{WH } \{y\} \\ \text{MAX-QUD } [\lambda_y [P(y)]] \end{array} \right]$$
- This '*sluiced-coord-ph*' is cross-classified as a subtype of sluiced-interrogative-clause and a coordination (Ginzburg & Sag 2000, Bilbiie & Gazdik 2012, Abellié & Chavez 2021).
- Below is a sample tree of the '*argument-adjunct pair*', with the application of the DI approach on CM-sluicing.
- (11) a. If someone is following us, we're going to find out **who and why**. (COCA 2009 MOV)
b. Structure:

7. Conclusion

- CM-sluicing is a distinct type of multiple *wh*-construction that is flexible with regards to its syntactic structure, which the DI approach can be much a simpler account for the authentic instances of CM-sluicing.
